

www.reelotek.com

At Reelotek, we are committed to supplying superior quality non-ferrous metal products for global industries. Our product lineup includes a wide range of Zinc and Aluminium in Primary and Commercial/Secondary Grades, designed to serve sectors like die-casting, galvanizing, extrusion and alloy manufacturing & electrical wires.

M I S S I O N

- › To supply premium quality Zinc and Aluminium products at competitive prices.
- › To ensure timely delivery and unmatched service across all levels of business.
- › To build trust through transparency and ethical business practices.

Primary and Commercial Grade Ingots

Aluminium

Ingots, Sow Ingots, T-Ingots,
Billets, Wire rods

Al

ZINC INGOTS

Primary Grade

High-purity Zinc Ingots crafted for precision and performance

SHG (Special High Grade)

99.995% purity—Ideal for galvanizing, chemical applications, and alloys.

PW (Prime Western)

High-quality ingots commonly used in galvanizing and plating.

ZAMAK 3 & 5

Standard die-casting alloys offering excellent castability and surface finish.

ZINC INGOTS

Commercial Grade

Economical and efficient Zinc solutions for industrial applications

PMI

Reliable for general casting and secondary manufacturing.

Galvanising Grades (GAMTI)

Designed for hot-dip and continuous galvanizing lines.

Die-Casting Grades

Wide range of custom and standard grades for zinc-based casting.

Oxidizing Grades

Suitable for applications in pigments, zinc oxide, and related chemicals.

Aluminium Products

INGOTS

Primary Grade

Our Primary Grade Aluminium Ingots are made from virgin aluminium with high purity levels, typically ranging from 99.7% to 99.9%, These ingots are ideal for industries that demand superior quality and consistency for their critical applications.

Secondary Grade

We also supply Secondary Grade Aluminium Ingots, manufactured using recycled aluminium and scrap. These ingots provide a cost-effective alternative for applications where ultra-high purity is not essential.

Aluminium Products

T-INGOTS

PAGE 07

T-SHAPED INGOTS

High-Density T-Shaped Ingots for Large-Scale Remelting

T - Ingots are designed in a compact T-shape, making them easy to handle and melt, especially in foundry and die-casting operations. Their uniform structure ensures efficient melting and consistent alloy composition.

Purity

Up to 99.7%

Weight

650 kg/ ingot

Applications

Die-casting, general foundry use,
non-ferrous alloys

Packaging

Packed in bundles or
strapped pallets

Aluminium Products

SOW INGOTS

SOW INGOTS

Bulk Aluminium Sow Blocks for Smelting Operations

Aluminium Sow Ingots are large-format ingots primarily used in re-melting operations for the production of slabs, billets, or other semi-finished aluminium products. Manufactured with high-purity aluminium, they are ideal for secondary smelting and alloy production.

Purity

Up to 99.7%

Weight

Up to 750 kg/ ingot

Applications

Billet casting, rolling mills, automotive components, foundries

Packaging

Loose or strapped bundles

Aluminium Products

WIRE RODS

Primary Grade

We offer Primary Grade Aluminium Wire Rods made from virgin aluminium with a purity of up to 99.8%. These wire rods are engineered for applications where high electrical conductivity and mechanical strength are essential.

PRIMARY GRADE – IDEAL FOR

- › Power transmission and distribution lines
- › Overhead conductors (AAC, AAAC, ACSR)
- › Transformer and motor windings
- › Electrical cable manufacturing

Aluminium Products

WIRE RODS

Commercial Grade

Secondary Grade Aluminium Wire Rods are produced by melting recycled aluminium and scrap through a continuous casting and rolling process. The molten aluminium is cast into a rod form and then rolled to the required diameter, resulting in a cost-effective product suitable for non-critical industrial applications.

SECONDARY GRADE – IDEAL FOR

- › Earthing wires and mesh
- › Aluminium braiding and flexible conductors
- › General industrial manufacturing
- › Wire drawing for non-electrical uses and secondary electrical wires

BILLETS

Precision Billets Ideal for Extrusion And Forging

Aluminium Billets are semi-finished casting products used as raw material in extrusion, forging and rolling processes. Produced through direct chill (DC) casting or continuous casting, our billets offer excellent mechanical properties, surface finish, and dimensional precision.

Purity

Up to 99.9%

Diameter

7" - 11" | 178 mm to
280 mm $\pm$ 1.5 mm

Surface

Smooth, defect-free
surface suitable for
extrusion and machining

Standards

Conforms to ASTM,
EN, and IS standards.
